Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: a control group and an experimental group. The control group received a standard diet, while the experimental group received a diet supplemented with 10% of the total energy from fat. The subjects were then subjected to a 10-week training program. The control group received a standard diet, while the experimental group received a diet supplemented with 10% of the total energy from fat. The subjects were then subjected to a 10-week training program.
